

SMRDefense

Sentient Machine Response

Investor Deck // March 2026

SMRDefense

Unleashing Autonomous Physical AI and Fleet Robotics to Secure, Monitor, and Maintain Distributed Energy and Critical Infrastructure.

The \$800B Problem

The grid is decentralizing. **We cannot hire enough humans** to protect millions of new assets. As distributed energy and critical infrastructure scales at unprecedented speed, **the gap between demand for physical security and available human labor continues to widen.**

85% of Critical Assets are Unmonitored

Leaving the nation's infrastructure exposed to threats, vandalism, and undetected failure.

\$800B Annual Downtime Loss

Lost annually to downtime caused by undetected failures, security breaches, and absence of real-time operational data.

\$650B Total Addressable Market

Combined security, O&M, and infrastructure monitoring spend SMRDefense is positioned to capture

The Infrastructure Security Gap

Distributed energy and mission-critical projects - including Turbines, Fuel Cells, Generators, Solar, Wind, SMRs, and Data Centers - face compounding and critical scaling risks that traditional human workforces cannot adequately address.

Physical Security Threats

High-value targets are increasingly vulnerable to sabotage, theft, and unauthorized access
→ risks that demand 24/7 autonomous presence, not periodic human patrols.

O&M Latency

Manual monitoring of remote sites is inherently slow and expensive. Response times lag, anomalies go undetected, and the cost per inspection compounds at scale.

Insurance Premiums

Rising risk profiles are driving up OPEX across the sector. Insurers are demanding greater real-time visibility and documentation

The ROI Case: SMRDefense replaces 4.2 FTEs of high-risk labor while consolidating disparate O&M and Security budgets into one fixed software subscription.

The Solution: Robotics-as-a-Service (RaaS) for Critical Infrastructure

SMRDefense leverages a fleet of **multi-purpose autonomous robotic assets**, powered by **advanced physical AI**, to provide comprehensive, 24/7 security and operational intelligence for critical infrastructure.

SMRDefense Solution: RaaS for Critical Infrastructure

Robotics-as-a-Service (RaaS) — a fully integrated, multi-modal autonomous platform purpose-built for critical infrastructure protection and operations. Five converging capability domains form one unified system.

AIR:

UAV Perimeter & Thermal Surveillance,
Rapid Autonomous
Response

GROUND:

Quadruped Dogs for
Patrol, Inspection,
Maintenance Arms,
Payloads & Access

HUMANOIDS:

Maintenance,
Resets, Swaps,
Robot-on-Robot
Servicing.

AI/ML:

Edge+Cloud AI for
Routing, BVLOS
Missioning, Armss,
Maintenance

Critical
Infrastructure

DATA:

M&V + Resilience Analytics
for Enterprise and
Insurers

\$650B TAM. Three Sectors. One Platform.

The market isn't waiting - and neither are we.

Why Now?

Three forces are converging to create a once-in-a-decade market opportunity. The window is open. We're moving first

The Grid Is Decentralizing

Rapid growth in SMRs, solar, and microgrids is creating new, unguarded perimeters across the energy landscape.

Robotics Has Crossed the Threshold

Robot hardware costs are plunging, making autonomous deployment economically and commercially viable at scale.

AI Has Unlocked Autonomous Ops

Advances in edge AI, computer vision, and multi-agent coordination now enables real-time autonomous decision-making directly in the field.

Why Us? Day 1 Scale

We are bypassing the 'Science Experiment' phase. SMRDefense is built on the backbone of GridMarket's established critical infrastructure.

100+

CAPTIVE ENERGY PROJECTS

Immediate deployment into active assets. We already have measurement, verification, and O&M contracts in place. No cold start.

50+

DATA CENTER & CRITICAL INFRA SITES

Pre-secured deployment slots with major hyperscalers awaiting delivery. Demand currently exceeds supply.

400+

GLOBAL VENDOR PARTNERS

A massive pre-built network for rapid component sourcing, local maintenance support, and logistics. Includes a captive pipeline of thousands of additional project sites.

ZERO

MANUFACTURING RISK

We are Hardware Agnostic. We integrate fully functional, insured, and warranted COTS (commercial off the shelf) robotics. We buy integrated robotics hardware and add our proprietary software

☑ **>> EXECUTION SIGNAL:** Unlike competitors searching for product-market fit → our distribution channels are pre-built, our customers are waiting, and our revenue model is active.

GridMarket Affiliation Advantage

GridMarket leverages the massive ecosystem already facilitating energy and microgrids for the world's largest manufacturers, cold storage providers, and hyperscalers

\$7B+

Active Project Pipeline

400+

Global Vendor Partners

100+

Deployed Projects

350M+

Global Sites Analyzed

- ✓ **The Next Frontier:** This established supply chain allows us to rapidly pivot to securing Hyperscale Data Centers and future SMRs, where autonomous security is mandatory to eliminate human risk.

SMRDefense Solution

Automated Robotics Team & Proprietary Software Platform

SMRDefense's Automated Team

A fully autonomous workforce powered by SMRDefense software and COTS (commercial off the shelf) hardware.

ARGUS

Air: The Eye in the Sky

High-speed autonomous drone. Never blinks. Detects heat signatures from 500 ft and intercepts threats instantly.

CERBERUS

Ground: The Loyal Scout

Patrols uneven terrain, climbs stairs, and inspects hazardous leaks. Robotic arm performs delicate repairs and hardware swaps with surgical precision.

TALUS

Humanoid: The Heavy Lifter

Dynamic and powerful. Moves heavy loads and navigates complex disaster zones efficiently.

The Automation Advantage

Human Patrol

Periodic. Slow. Expensive.

~400

Acres / Day

<50

Data Points / Day

SMR Fleet

Autonomous. Continuous. Scalable.

15,000+

Acres / Day

1,000,000+

Data Points / Day

37× more coverage. 20,000× more data. One autonomous fleet.

Hardware-Agnostic Autonomy

We deploy COTS (commercial off-the-shelf) hardware layered with our proprietary "Fleet Brain"

Hardware Agnostic

Proven units from leading robotics providers

Domestic Production

Partnering with Duke University & Northern Illinois University to facilitate domestic supply chain and manufacturing of optimized robotics for next phases

Strategic Funding

Securing DoD and DARPA grants to fund proprietary fleet development for subsequent growth phases

Product Platform

Our proprietary software platform seamlessly integrates off-the-shelf robotics hardware, enabling a truly **vertically integrated solution** from sensor to insight → allowing for unparalleled automation in security, monitoring, and maintenance.

Continuous monitoring and coordination

Encrypted, resilient communications

AI driven diagnostics, predictive maintenance, and digital-twin integration

Maintenance Task Matrix

Assign and monitor maintenance tasks for your robotic fleet.

Task	Description	Status	Assigned Robot	Actions
SMR Coolant Pipe Inspection	Scan primary coolant loop for thermal anomalies and potential stress fractures.	Idle	N/A	...
Data Server Rack Swap	Replace faulty server blade in data hall C, rack 27.	Pending Approval	Apollo	...
Turbine Blade Weld Inspection	Perform ultrasonic weld inspection on Gas Turbine GT-3 blades.	Idle	N/A	...
Fuel Cell Hydrogen Sensor Calibration	Calibrate hydrogen sensors across the Matrix Fuel Cell Park.	In Progress	Eagle Eye 1	...
Port Crane Structural Scan	Scan gantry crane G-4 for structural fatigue using lidar.	Completed	Atlas	...

Saved Routes

Manage and execute predefined patrol routes.

Route Name	Waypoints	Status	Last Run	Actions
SMR Reactor Core Perimeter	18	Idle	2025-10-01 04:00:00	...
Fuel Cell Stack Inspection	32	In Progress	2025-10-01 09:30:00	...
Data Hall Thermal Scan	24	Completed	2025-09-30 17:00:00	...
Port Container Yard Security	40	Idle	2025-09-30 22:00:00	...
Solar Array Inspection	56	Idle	2025-10-01 06:00:00	...
BESS Thermal Monitoring	20	Idle	2025-10-01 08:30:00	...
Wind Turbine Blade Inspection	12	Idle	2025-09-30 14:00:00	...
Microgrid Perimeter Patrol	28	Idle	2025-10-01 09:00:00	...

Fleet Management

Overview of all autonomous units in operation.

Unit	Type	Status	Location	Battery
Apollo	Humanoid	Active	SMR - Performing valve maintenance	78%
Go2-Alpha	Drone Dog	Active	Data Center - Perimeter security patrol	82%
Eagle Eye 1	UAV	Active	Port - Container crane inspection	95%
Atlas	Humanoid	Maintenance	Charging Bay 1 (Fuel Cell site)	15%
Go2-Bravo	Drone Dog	Idle	Docked (Gas Turbine site)	100%
Eagle Eye 2	UAV	Offline	Hangar (SMR Site)	0%

Dynamic Threat Response

Threats identified based on detected entity type and distance.

Detected Entity: Human Intruder

Distance to Entity: 30 feet

Response Rules: Using predefined "learned" profiles for different entity types. These rules determine the robot's actions. View Rule Rules

Go, Run Simulation

Simulated Robot Action

The action description generated by the AI based on the inputs.

Action Protocol: Approach the human intruder at a slow speed, maintaining a distance between 10 and 15 feet. Follow and escort the intruder while issuing an audio warning. Warning: You are in a restricted area. Authorities have been notified. Turn on headlights, record video, take a snapshot, and transmit a live feed.

Recent Safety Incidents

A log of safety issues automatically detected by the robotic fleet.

Time	Severity	Type	Description	Reported By
14:32:11	High	PPE	Worker detected without a hard hat in an active construction zone.	Eagle Eye 1 (UAV)
11:05:45	Medium	Hazard	Liquid spill detected near BESS-02. Potential slip hazard.	Go2-Alpha (Drone Dog)
09:15:02	Low	Equipment	Forklift operating at 8 mph in a 5 mph zone.	Go2-Bravo (Drone Dog)
08:45:23	High	PPE	Personnel not wearing arc flash gear within 10ft of active high-voltage cabinet.	Apollo (Humanoid)

Fleet Brain

Centralized AI Orchestration

- The SMRDefense Fleet Brain is the command center, coordinating a diverse array of robotic assets with predictive intelligence and adaptive response capabilities.
- Using Edge AI and real-time cloud analytics, SMRDefense synchronizes robotic dogs and UAVs for seamless transition between patrol, response, and maintenance.
- The platform turns raw sensor data into actionable insights, ensuring comprehensive, proactive defense of critical infrastructure.

Flexible Fleet Deployment

The SMRDefense platform is designed for rapid, modular deployment across any critical infrastructure site. From a single solar farm to a nationwide network of data centers, the architecture scales without added complexity.

- ✓ Each deployment phase is managed through our cloud platform, enabling remote provisioning, over-the-air software updates, and centralized fleet management → eliminating the need for on-site technical specialists.

Fleet Unit Economics

SMRDefense fleets are comprised of 3 robot units. Customers can either purchase 2 ARGUS UAVs + 1 CEREBERUS Ground Dogs OR 1 ARGUS UAV + 2 CEREBERUS Ground Dogs.

Annual Revenue Per Fleet Deployment

\$250,000

Core autonomy license + analytics and insights + SLA support tier

Cost to Service Fleet Annually (Recurring)

\$30,000

Field maintenance + cloud infrastructure + remote monitoring

Hardware Costs for Fleet (One-time CapEx)

\$150,000

Robot fleet (x3 units) + deployment and installation + sensor suite and compute. Costs are amortized over 3 years expected fleet lifetime

87%

Gross Margin

64%

Operating Margin

- 🕒 Shifting from CAPEX to OPEX: Clients benefit from a subscription-based service that scales with their needs, avoiding large upfront capital expenditures while maximizing security and efficiency.

The ROI Case for Customers

For every customer, SMRDefense delivers a compelling, measurable return on investment. By replacing high-risk human labor and consolidating fragmented O&M and security budgets into a single subscription, the economics are transformative.

- ✓ Customers with SMRDefense pay \$250k per year for fleet (x3 units) + analytics, SLA support, and insurance credits vs \$650k+ per year BEFORE SMRDefense for human guards (~\$350k/year) + manual O&M (~\$300k/year).

Competitive Differentiation Matrix

A head-to-head comparison across the dimensions that matter most to enterprise buyers - coverage, intelligence, scalability, and cost efficiency.

CAPABILITY	SECURITY GUARDS	FIXED CAMERAS	SINGLE-MODAL ROBOTS	SMRDef
24/7 Autonomous Coverage	✗	⚠ Partial	⚠ Partial	✓
Multi-Modal Platform	✗	✗	✗	✓
Predictive Maintenance	✗	✗	✗	✓
Physical Intervention	✓	✗	⚠ Limited	✓
Scalable to 1,000+ Sites	✗	⚠ Partial	✗	✓
Insurance-Grade M&V Data	✗	✗	✗	✓

Market Dynamics

Go-to-Market Strategy,
Competitive Landscape,
and Our Team

Go-to-Market Strategy

SMRDefense will pursue a **land-and-expand** motion - entering accounts through a focused pilot program, demonstrating clear ROI, and expanding fleet deployments site-by-site and vertical-by-vertical. Channel partnerships will accelerate reach.

Product Roadmap: 2025-2027

The Competitive Landscape

SMRDefense sits at a unique intersection: **no single competitor currently offers a fully integrated, multi-modal autonomous platform for critical infrastructure.** Existing solutions are either hardware-only, software-only, or narrowly scoped to single use cases.

Traditional Security Guards

Human-only, high-cost, limited coverage, significant labor risk, and unable to scale with distributed infrastructure growth.

Fixed Camera Systems

Static, blind-spot-prone, reactive rather than proactive, and incapable of physical intervention or maintenance tasks.

Single-Modal Robot Vendors

Drone-only or ground-robot-only solutions lack the multi-modal coordination and software intelligence needed for full-site coverage.

SMRDefense Advantage

Fully integrated AIR + GROUND + HUMANOID + AI/ML + DATA platform
→ the only solution that covers the entire operational and security stack in one subscription.

Detailed Competitor Analysis

CAPABILITY	TRADITIONAL SERVICES	ROBOTICS HARDWARE VENDORS	AI/SOFTWARE PLATFORMS	SINGLE-MODAL ROBOTS	SMRDEFENSE
Integrated Multi-Modal (Air/Ground)	✗	✗	✗	✗	✓
Autonomous Operation (24/7)	✗	⚠ Limited	⚠ Data Only	⚠ Partial	✓
Predictive AI & Analytics	✗	✗	✓	⚠ Basic	✓
Physical Presence & Intervention	✓	⚠ Passive	✗	⚠ Passive	✓
RaaS Model (Service-based)	✓	✗	✓	✓	✓
Scalability & Centralized Management	✗	✗	✓	✗	✓

✔ SMRDefense stands apart in the rapidly evolving landscape of critical infrastructure protection, offering a holistic solution that current market players cannot match. Our integrated approach provides distinct advantages over traditional methods and fragmented robotic offerings.

Risk Factors & Mitigations

SMRDefense has identified and is actively mitigating the primary risks associated with bringing an autonomous critical infrastructure platform to market. Transparency here reflects the maturity of our risk management approach.

RISK	DESCRIPTION	MITIGATION
Regulatory Delay	FAA or NRC certifications may take longer than projected	Early engagement, modular compliance architecture, ground-only pilots in interim
Hardware Supply Chain	COTS hardware availability and lead times	Multi-vendor OEM relationships, safety stock procurement with Series A capital
Customer Adoption Speed	Enterprise procurement cycles can be slow	Pilot-first model reduces procurement friction; ROI demonstrated within 90 days
Cybersecurity	Autonomous systems present novel attack surfaces	Zero-trust architecture, air-gapped edge deployment option, continuous pen testing

Built by Experts & Strategic Hires

Goal: Lean multi-billion dollar company through automation, AI, and expertise

Nick Davis

CEO / Co-Founder

Experience: CEO/Founder, GridMarket: Scaled AI-driven energy platform.

Track Record: Manages F500 investments and drives profitability for \$80M+ company. Proven lean approach with 15+ years experience.

Education: MA, Duke University; BA, Northwestern

Sabina Ahuja

Operating Co-Founder

Experience: Former VP Revenue, NJOY (acquired for \$2.75B). Led national retail strategy, scaling store count 40x from 800 to 33k+ stores.

Track Record: 15+ years experience building and scaling high growth CPG, retail, and tech companies.

Education: MBA, Columbia University; BA, Northwestern

Peter Lin

Technical Lead

Robotics Architect: 15+ years in autonomous nav systems.

Role: Leads "Fleet Brain" software interoperability.

Focus: Bridging legacy intra & future robotics

Guy Egan

VP Operations

Experience: Former U.S. Marine Corps Drone Pilot & Mobilization Planner.

Track Record: Former Policy Advisor, U.S. Department of State, Office of Threat Management & Operational Coordination

Education: BA, Northwestern

Investment Opportunity

Capital Ask, Use of Funds, and Financial Projections

\$50M Investment Opportunity

Seed Series Equity: \$20M

Strategic capital to scale operations, perfect the platform, and expand sales channels.

Field Hardening & Ops: **\$9M (45%)**

AI & Software R&D: **\$6M (30%)**

Sales & Defense Channels: **\$3M (15%)**

G&A / Legal: **\$2M (10%)**

Debt / Credit Facility: \$30M

Non-dilutive asset financing specifically for revenue-generating hardware procurement

Hardware Procurement: **\$25M (83%)**

Deployment Logistics: **\$5M (17%)**

Why Debt? Our hardware generates immediate, high-margin recurring revenue, making it an ideal candidate for asset-backed financing rather than expensive equity.

Financial Projections

Year 5 revenue target: \$1.8B, scaling from initial pilots to 1,000+ deployed fleets.

SMRDefense is targeting aggressive but achievable revenue growth driven by a land-and-expand RaaS motion, government contract capture, and increasing fleet deployments per customer. Revenue scales with fleet deployments and expanding enterprise accounts. The RaaS model drives compounding ARR as existing customers expand site coverage year-over-year.

SMRDefense
